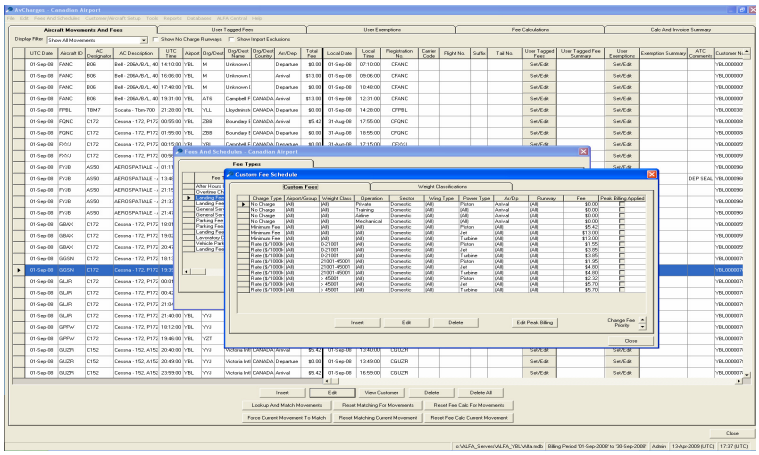
FEATURE PROJECT PROFILE

ALFA Airport Billing System



Since its introduction in 1997 PSMI's ALFA Airport Billing Solution has been assisting airports with the generation invoices at Canadian airports of all sizes. With more than 25 Canadian Sites using ALFA, PSMI has developed an unparalleled breadth of experience with when it comes to Airport Billing in the Canadian context.

Airports generate revenue in very unique ways including fees based on aircraft movements, aircraft services, passenger fees, leases, concessions and many other recurring and one-time fee generating services. In many cases these fees are unique to the individual airport and environment in which they operate. Managing and processing this information can be a very complex and difficult task. ALFA has been designed to create an efficient and flexible tool to manage these processes through a high degree of automation, customizable functionality and ease of use. Designed originally for the Canadian environment, ALFA automates the importation of all types of NCAMS data files.

ALFA in effect reduces the level of effort required to generate the billings, thus ensuring maximization of revenues with minimal administrative cost and effort.

PROJECT LOCATION
Canada

PROJECT TYPE
Software & Information Systems

CLIENT TYPE
Airport Authority

CLIENT NAME
Canadian Airport Authorities
