

PRYDE SCHROPP McCOMB INC.

FEATURE PROJECT PROFILE

Markham Stouffville Hospital

Heliport Assessment and Relocation

Pryde Schropp McComb, Inc. (PSMI) was retained by the Markham Stouffville Hospital to conduct an analysis of the existing surface-level heliport and to determine suitable re-location sites including both surface level and roof-top options.

This analysis was required as a result of significant redevelopment of the existing Hospital including the expansion of hospital to double its existing size and the construction of a new on-site Community Center and Library.

Over the course of the project, PSMI will assist the Markham Stouffville Hospital and the City of Markham in evaluating, upgrading, and relocating the existing surface-level heliport to accommodate the proposed Community Center and Library. As part of the Hospital expansion program, a new roof-top heliport will be constructed, where PSMI will be responsible for the design, construction supervision, and commissioning.

Significant consultations with Transport Canada, the City of Markham, Emergency Services (Police, Fire, and Ambulance), and ORNGE will be required throughout the project.

PROJECT LOCATION

Markham, Ontario, Canada

PROJECT TYPE

Planning & Regulatory

CLIENT TYPE

Institutional
